Dataset & analyzing

Dataset: Superstore Sales Dataset

Analyzed sales, profit, orders, products, customers, discounts, and shipping.
Cleaned and prepared the data using Python/Pandas.

Created calculated fields such as:

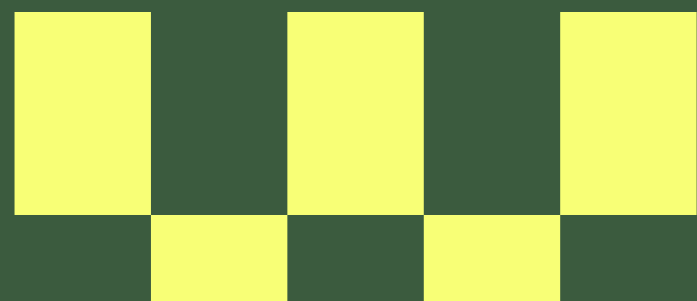

Profit Margin

Discount Level

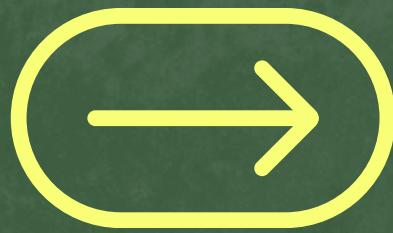

Shipping Day Delay

Profitability Status

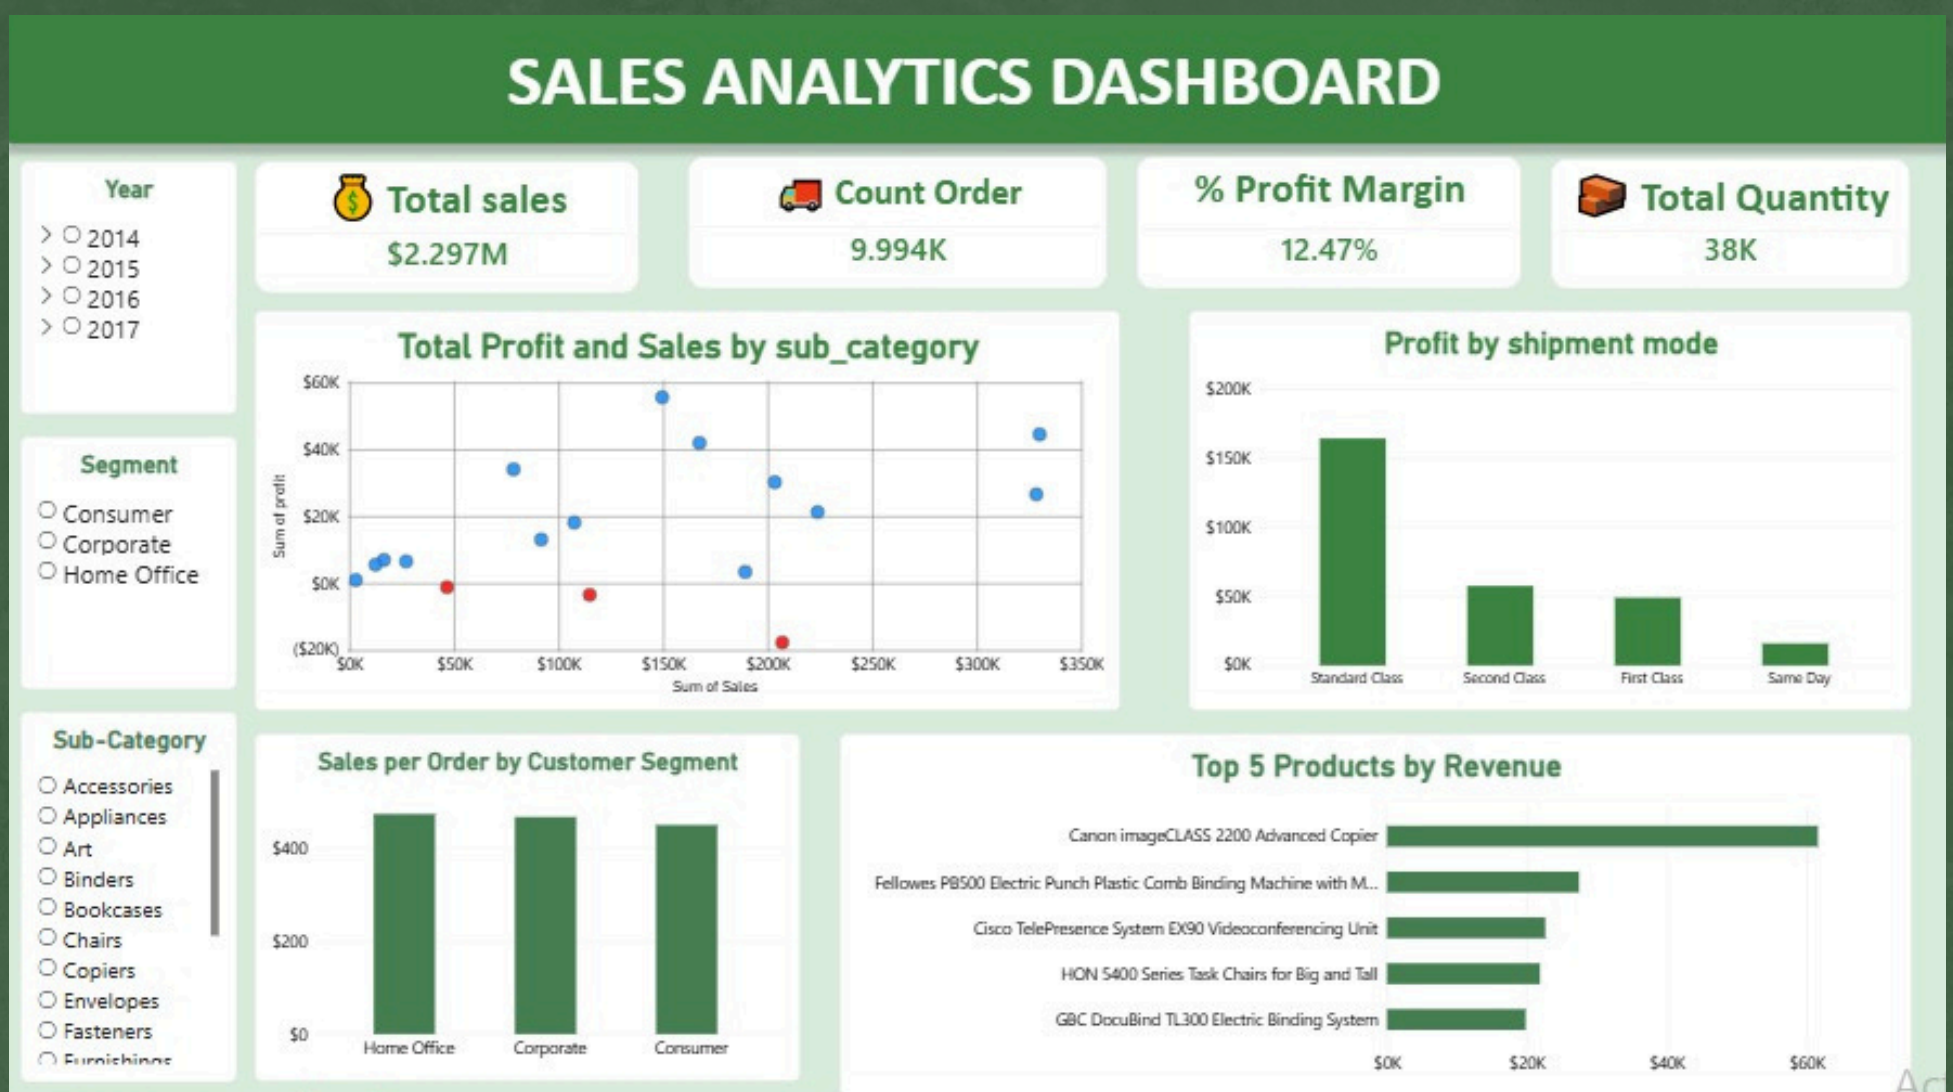

Created interactive dashboards using Power BI.

Dashboard

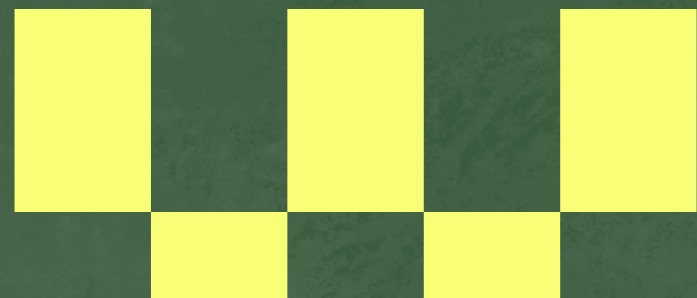

Main Dashboard
Sales & Profit Overview
Total Sales: \$2.297M
Total Orders: 9.994K
Profit Margin: 12.47%
Total Quantity: 38K
Sales & Profit by Sub-Category
Profit by Shipment Mode

Detailed Business Analysis

Key Analysis
Top 5 Products by Revenue
Monthly Sales Trends
Least Profitable States
Sales per Order by Customer Segment
Discount Level vs Sales Volume
Sales & Profit by Category/Sub-Category

Strategic Recommendations

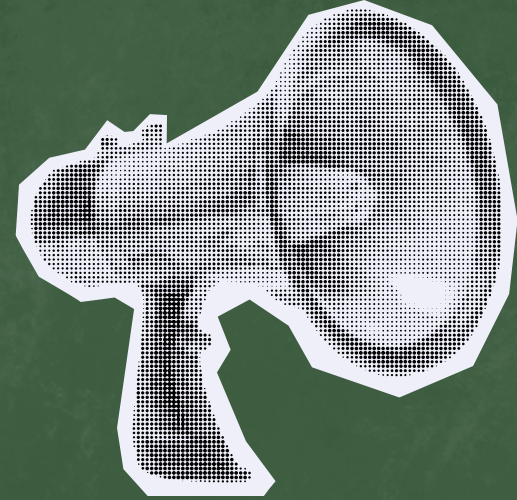

Limit Discounts: Keep discounts at 20% or below to protect profit.

Improve Furniture Profit: Review prices and costs for Tables and Bookcases.

Improve Regional Strategy: Review pricing and discounts in the Central region.

Focus on Profitable Products: Promote strong products like Copiers, Paper, and Technology Accessories.
